Complete satisfaction for your patients

Good food is considered part of the treatment of a hospitalised patient; proper diet and food management expedites the improvement process and discharge from hospital and is also an important factor for satisfaction during admission.

DietTools is the most reliable solution for this challenge. With over twenty years' experience, it is the pioneering tool that confirms its leadership year after year, thanks to its strategy of constant evolution.

Its advanced tools support decision making and help improve:

- Patient **safety**
- The **quality** of care
- Clinical **efficiency**
- User **satisfaction**
- Food **traceability**

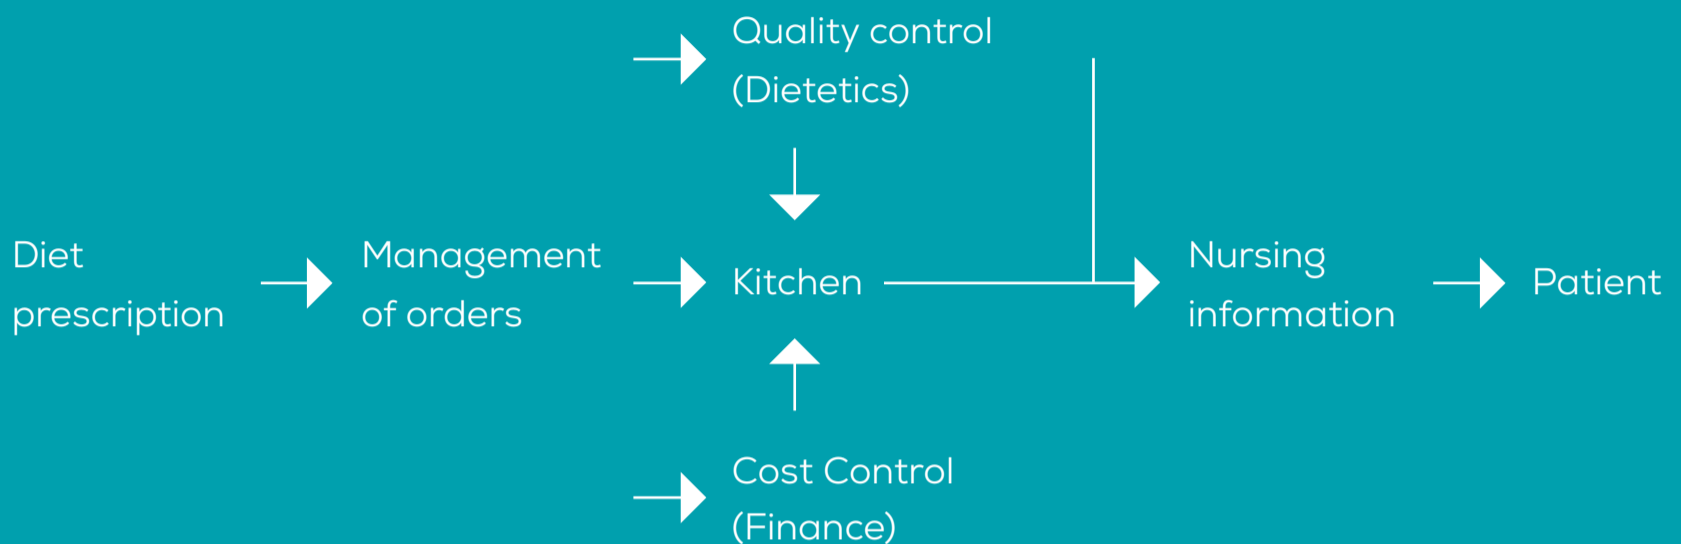

Advantages

- ✓ Immediate information
- ✓ Personalised service
- ✓ Reduction in costs
- ✓ Time saving

Simplicity

DietTools provides simple automation for a normally complex process: starting with the dietary prescription of the patient, which is automatically sent to the dietetics and cooking departments, then the quality control, to the delivery of the food tray to the patient.

Technical characteristics

- Visual environment
- Independence of Databases
- Multi-centre
- Connectivity with other applications
- Integration with the majority of HISs on the market

Functional characteristics

- Design of diets
- Multi-centre/Multi-kitchen management
- Choice of Set Menus for optional diets
- Allergies to Families of foodstuffs
- Bottle modules
- Contract management
- Breaking down of set menus into dishes and ingredients
- Records of patient's diets and dishes
- Management of staff Canteens
- Lists and reports exportable to Excel
